<b>Description</b>	Cadherin-17 is a protein that in humans is encoded by the CDH17 gene. This gene is a member of the cadherin superfamily, genes encoding calcium-dependent, membrane-associated glycoproteins. The encoded protein is cadherin-like, consisting of an extracellular region, containing 7 cadherin domains, and a transmembrane region but lacking the conserved cytoplasmic domain. The protein is a component of the gastrointestinal tract and pancreatic ducts, acting as an intestinal proton-dependent peptide transporter in the first step in oral absorption of many medically important peptide-based drugs. The protein may also play a role in the morphological organization of liver and intestine.

## SDS-PAGE

This protein on SDS-PAGE under reducing (R) condition. The gel was stained overnight with Coomassie Blue. The purity of the protein is greater than 95%.

## Bioactivity-ELISA

### Biotinylated Human CDH17 Protein; His-Avi Tag ELISA 0.6 µg Anti-CDH17 hIgG1 Antibody(BI-905711) of per well

Anti-CDH17 hIgG1 Antibody(BI-905711) (Catalog # GM-52672AB) was immobilized at 6 µg/ml (100 µL/well). Increasing concentrations of Biotinylated Human CDH17 Protein; His-Avi Tag (Catalog # GM-76946RP) were added, and then detection was performed using HRP Streptavidin (1:1000).
