Application Negative control

Description A homologous control antibody is an antibody that is used to control the

target antibody in an experiment. The homologous control antibody should have the same immunoglobulin type and concentration as the test antibody, but not have the same specificity as the target antibody. It is often used to help researchers distinguish between non-specific signals and background signals in experiments to ensure the accuracy and

reliability of experimental results.

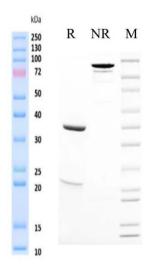

Formulation PBS, pH 7.4, Contains no stabilizers or preservatives
